I/O MODULES

Features

- Available with 4, 8, 16, 24, 32, 40 or 48 position
- Simple Panel mounting with 4 screws
- Screw terminals to field
- Easy to change fuses
- LED Status Identification
- Numbered terminals for easy identification
- Designed specially for STANDARD Modules

DESCRIPTION:

SATRONIX introduces a range of I/O modules to meet demands of the industrial control market.

These I/O modules are self-contained and include power terminals, status LED indication for each relay. I/P & O/P are optically isolated. Individual fuses are provided in series with the O/P.

Internal transient suppression. Universal mounting base by Phoenix Contact. Chassis mounting and Din rail mounting using same base. PCB can also be mounted directly.

SRM and peripheral components complete the wiring to these components together with individual data lines and common busing to the controller via (D-type/FRC connector and RS 232 cable or edge connector available with the module).

The module contains all the necessary circuitry to provide complete interface between controller and load without the need for further design or additional circuitry. Available in options of 1, 4, 8, 16 & 24 SSRs.

Available in 4 types of SSRs: 1. I/P : 3 ñ 32 VDC O/P : 30 VDC / 50mA

I/P : 90 ñ 280 VAC O/P : 5 VDC / 50mA

I/P : 3 ñ 32 VDC O/P : 3 ñ 60 VDC / 3Amps or 5 ñ 200 VDC / 1A

I/P : 3 ñ 32 VDC O/P : 24 ñ 280 VAC / 3 Amps

Customs built modules can be made available onrequest. For further details contact at the address as below
